

HUBLOT

HUBLOT - Classic Fusion Skeleton Tourbillon

With a chic sporty look which is more classical than the Big Bang, a slimmer profile and a timeless elegance which draws on traditional watchmaking values (while remaining faithful to Hublot's refined and dynamic codes), for the first time, the Classic Fusion is fitted with a tourbillon movement.

With a chic sporty look which is more classical than the Big Bang, a slimmer profile and a timeless elegance which draws on traditional watchmaking values (while remaining faithful to Hublot's refined and dynamic codes), for the first time, the Classic Fusion is fitted with a tourbillon movement. This was a logical and necessary step to meet demand. In fact, the Classic Fusion line was created in 2008, firstly as a model with 3 hands, then fitted with a date window. Last year, in 2011, Hublot met with huge success when it unveiled a chronograph model.

A refined, graphic and ultramodern design for the queen of traditional Haute Horlogerie complications: this skeleton movement is entirely designed, developed and produced in the workshops of the Hublot Manufacture. On the dial, it is worth noting that the hands are similar in design to those on the very first Hublot watches: a clever reference to the history of the brand. With an impressive 120-hour power reserve and watertight to 5 ATM i.e. approx. 50 metres, this piece is available in two versions, titanium and 18K King Gold, a particularly intense colour of gold, the fruit of a precious alloy developed by Hublot. This colour is obtained by adding 5% platinum to the mass of melting gold, giving it a visual impact which is reinforced by the contrast with the black coating of the other components. Each version is limited to 50 editions.

TECHNICAL SPECIFICATIONS:

References:

505.NX.0170.LR - Titanium version (limited to 50 pieces)
505.OX.0180.LR - 18K King Gold version (limited to 50 pieces)

Case:

"Classic Fusion" - Diameter 45 mm
Titanium or 18K King Gold, polished, satin-finished

Bezel:

Titanium or 18K King Gold, with vertical satin finish
6 H-shaped titanium screws, countersunk, polished & locked

Crystal:

Sapphire with interior/exterior anti-reflective coating
Metal Hublot logo made from silver/red gold

Bezel Lug:

Black composite resin

Crown:

Polished titanium or 18K King Gold, with Hublot logo

Case-back:

Satin-finished titanium or 18K King Gold, satin-finished
Sapphire crystal with interior anti-reflective treatment
Water-resistant to 5 ATM, i.e. approx 50 metres

Dial:

Sapphire with anti-reflective coating on topside/underside
Polished & rhodium-plated or 18K red gold-plated indexes

Hands:

Polished & rhodium-plated or 18K red gold-plated

Movement:

MHUB6010.H1.1(Titanium)
MHUB6010.H1.8 (King Gold)
Self-winding skeleton tourbillon movement produced by the Manufacture
155 Components
19 Jewels
Frequency: 3 Hz (21,600 Vib/h)
Power reserve: Approximately 120 hours

Strap:

Black alligator strap stitched onto black rubber

Clasp:

Steel deployant buckle (Titanium version)
Deployant buckle in black PVD steel and 18K red gold (18K King Gold version)
